

ANNA NGWENYI MAFOR

28, Cameroon

Anna is a 28-year-old environment and technology enthusiast from Cameroon, who uses her tech skills to solve agricultural challenges and reduce unemployment.

FOUNDER AND CEO of My SDGs DOKTA

A SOCIAL ENTERPRISE THAT PROVIDES WOMEN FARMERS WITH AN AI-DRIVEN MOBILE APPLICATION TO MONITOR AND DETECT CROP DISEASES EASILY, COST-EFFICIENTLY AND IN AN ENVIRONMENTALLY FRIENDLY WAY

ABOUT MY SDGS DOKTA

Women have always been the backbone of the farming sector in Africa providing 60% to 70% of food production. Therefore, it is crucial to empower them to earn and have food security.

With the My SDGs DOKTA's mobile application, farmers can take a photo or upload a picture of their crop to the platform, and the platform will analyze if the leaf is healthy or not.

The application then provides them with causes of and solutions to the disease. This method is cheaper, easy to use, and more environmentally friendly than most monitoring machines.

This initiative will, thus, boost food productivity and has the potential to generate revenue and reduce hunger by aiding rural women farmers to produce and sell more food.

VOICES OF WOMEN IN AGRICULTURE

Wasi Bonikeso Yaya, a local farmer in the Ngoussou community was the first person that tested My SDGs DOKTA's drone to scan the growing corn and detect diseases. The app proposed a solution for her crop issues and a few months later, she had a double increase in her corn production.
